

Pursuant to Indiana Governor Eric Holcomb’s Executive Order 20-05, “Helping Hoosiers During the Public Health Emergency Declared for the Coronavirus Disease 2019 Outbreak”, Section 13. B., the Indiana State Department of Health declares its regulations and procedures pertaining to Expedited Partner Therapy (EPT) for Chlamydia and Gonorrhea to be expanded for the duration of the outbreak response, as follows:

Health care providers are permitted to prescribe or dispense oral medications for the infections of *C. trachomatis*, *N. gonorrhoeae*, and *T. vaginalis* to heterosexual partners and males with male partners. This is an expansion of current regulation and policy to include one additional sexually transmitted infection (*T. vaginalis*) and an additional population at risk. All other provisions of the EPT regulation remain in force.
